## (57) Abstract :

Multipurpose Electric and Electronic Device Controller Using Specially Designed Circuitry Board with Artificial Intelligence Based Supporting Software Application to Control Input-Output Signals with Analyzed Data The innovation provide effective controlling and analysis tool with a facility of circuitry board to get and control connected devices. The circuitry board with effective analysis tool based on artificial intelligence record data like Duration, Electricity Consumption, When and How many times a device is used and analyze it through artificial intelligence tool. The innovation support and promote new and advanced way of educational, experimental aspects in the field of electric, electronic and artificial intelligence. Innovation also support developers community by making a supportive circuit based on artificial intelligence which can be utilized by present and futuristic technologies. Database is collected from various electric and electronic devices by connecting to port in the circuit board. Then a user will get an analyzed data by using Artificial Intelligence based tool.
